SAYKAL ELECTRONICS INFORMATION SECURITY POLICY

Saykal Elektronik A.Ş. has established an Information Security Management System (ISMS) to assess and protect the information it holds against internal and external threats in line with the principles of confidentiality, integrity, and availability. To carry out its activities effectively, accurately, promptly, and securely, the company commits to meeting ISMS requirements, maintaining the system's effectiveness, and continually improving it.

The company assesses existing and potential risks in light of legal requirements, applicable standards, contractual obligations, and customer requirements. Through this policy, the company communicates its commitment to meeting information security requirements to interested parties.

The company sets measurable and achievable objectives for its people, systems, information assets, and operating rules. It regularly reviews and updates these objectives and conducts its activities in a manner that supports business continuity.

To meet our information security objectives, we commit to

- Establishing, documenting, implementing, certifying, and continually improving the ISMS in accordance with ISO/IEC 27001:2022 requirements.
- Increasing employee awareness of information security and developing employees' skills.
- Identifying, analyzing, assessing, and managing information security risks through appropriate controls to maintain the ISMS in line with our strategic business plan and risk management approach.
- Complying with applicable information security laws, regulatory requirements, and contractual obligations.
- Systematically managing risks to protect the confidentiality, integrity, and availability of company and customer information assets.
- Backing up critical systems and data, storing backups securely, and testing restoration.
- Logging and monitoring activity across systems, networks, and applications and analyzing logs as needed.
- Defining and implementing retention, access, and disposal processes for personal data.
- Defining information security responsibilities, duties, and authorities within the company.
